Dear Valued GastroPlus™ User,

We are pleased to announce the release of GastroPlus 9.5, with enhancements and updates for users across departments and research functions! The GastroPlus 9.5 Release Notes.pdf describes the new features available in this version.

The GP95-Install.zip file is 250 MB, so it will take 5 minutes to completely download. After downloading, please first extract the files from the .zip package before installing. As a reminder, GastroPlus runs on Windows 7, 8, and 10 systems, or Mac computers through Parallels (or similar Windows virtualization).

You will not need to uninstall/overwrite GastroPlus 9.0 – in fact, we encourage you to retain this version in case you want to continue to use it on certain projects. Also, your current license will continue to work with the new version, so there will be no need to resend your HOSTID.

Should you have any questions, please feel free to reach out to our licensing department: licensing@simulations-plus.com

Thanks so much for your time and support. It is most appreciated.
