Installation Instructions for the Flexera License Server - LMADMIN

Before you begin

In order to install the Flexera License Server, you must have Administrative privileges. Flexera License Server Manager requires that Java 6 or higher is installed prior to installing the Flexera License Server.

During the Flexera License Server installation process, a file named SLP_HOSTID_Info.txt will be created on your desktop. This file needs to be emailed to <u>licensing@simulations-plus.com</u> to provide information required to create your license file (LicenseFile.lic).

Once you have received your license file from Simulations Plus, you will need to import this license file into the Flexera License Server.

Installation

Open the "AP80-Install" folder that was created by uncompressing the "AP80-Install.zip" folder. Double click on "advanced.exe" application.

The dialog box below will be displayed. Click on the "Flexera LMADMIN Server" button.

First, the installation Introduction screen will be displayed.

Click "Next" to continue.

InstallAnywhere Cancel Help	Previous Next

The installer will attempt to start the licensing server.

When the server starts, a browser window will open. You should see "FlexNet Publisher" in the top left corner.

HexNet License Administr ×	
← → C C localhost8090/dashboard?vendor=&dicenseTab=&selected=	2 =
FlexNet Publisher*	
Alerts Licenses	
Critical Poduct Version Detached (Total) Overdraft Expiration	
© 2013 Flexera Software LLC. All Rights Reserved.	

If a browser window did not open, the server may need to be started manually. A one-time reboot of your system after completing the installation will usually solve this. The server will start each time your machine boots up.

Click on "Done" to complete the license server install.

The Flexera License Server is now installed.
