

DILIsym[®] 3-Day Workshop

February 25 - 27, 2019 in Redwood City, California

Who should attend?

This is a beginner's course for pharmaceutical/biotechnology scientists and engineers in the areas of toxicology, clinical pharmacology, pharmacovigilance, DMPK and ADME - prior experience with DILIsym is not required. The course will use DILIsym, but the guiding principles will be taught in a software-independent manner. Class size is limited to encourage interaction with the course instructors and among attendees. Networking among industry, government, and academic scientists is part of the experience!

What will you learn?

You will understand the following important aspects of liver safety investigation:

- general concepts accepted by regulators related to DILI monitoring and detection
- primary mechanisms often involved in DILI events (mitochondrial dysfunction, ROS, bile acids, lipotox)
- *in vitro* assay design and execution for DILI-related mechanisms
- pharmacokinetics including prediction of liver concentrations and how this impacts DILI predictions

You will gain basic experience with:

- translating *in vitro* data into DILIsym parameter values
- simulating expected DILI outcomes for humans, rats, mice and dogs
- utilizing simulated populations (SimPops™) to predict infrequent events in a diverse patient population

How will the workshop operate?

CPUs will be provided for on-site attendees. All remote attendees will be responsible for acquiring/using their own computers.

Attendees have the option of registering for one or all three days of the workshop. Both remote and on-site attendance are available for the same price.

Day 1 – General DILIsym Introduction

Day 2 – Step by step compound representation in DILIsym

Day 3 – Advanced features in DILIsym (SimPops, Optimization, Monitoring, Specified Data for PK)

Continental breakfast, snack breaks, and lunch will be provided each day.

Where will this be held?
