

# API Enabled HTPK Deployment of Early PK Assessments for Drug Discovery

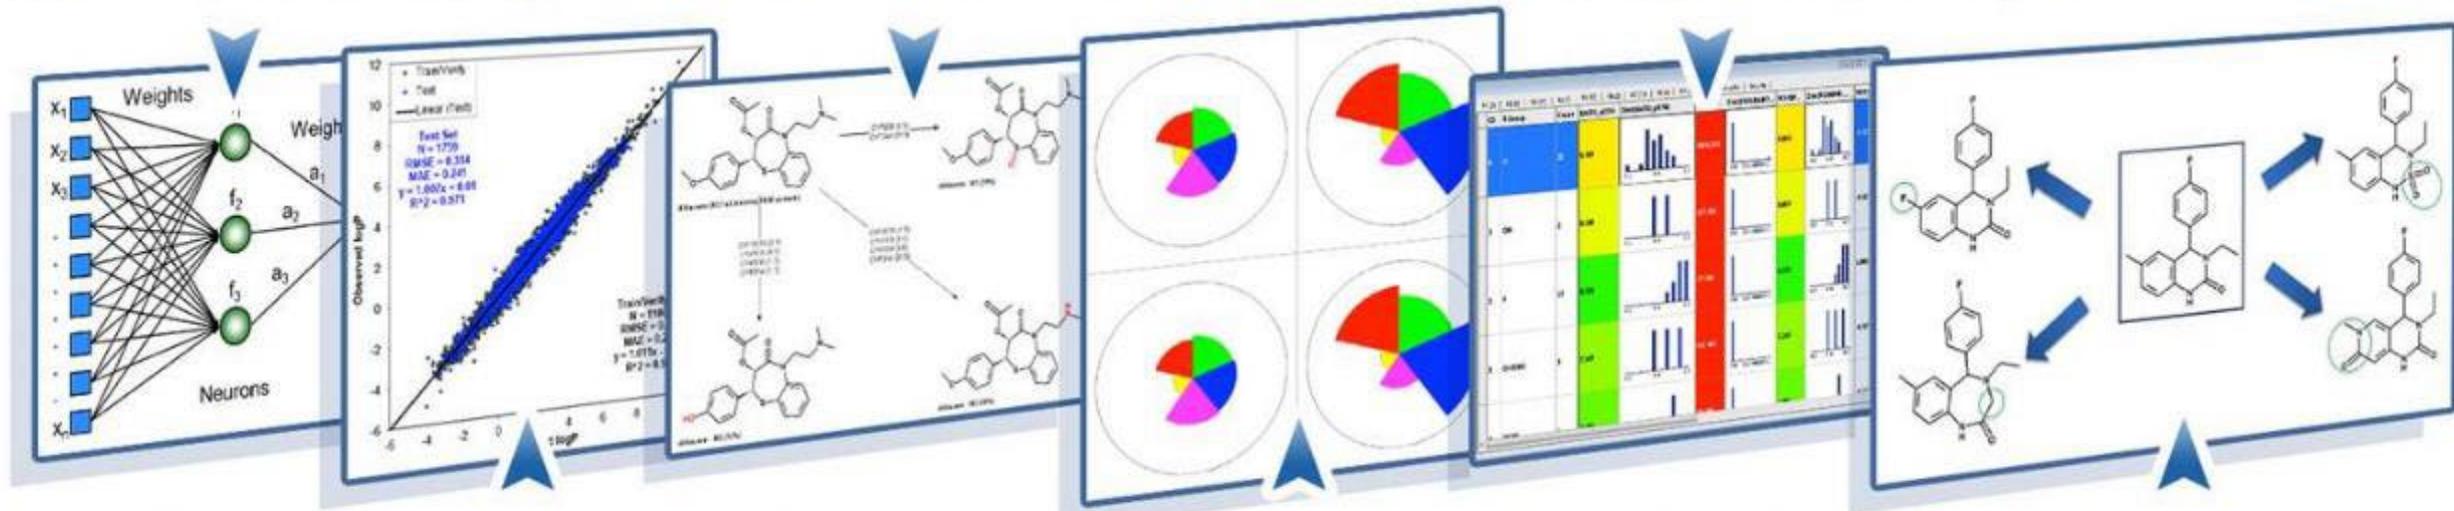

# ADMET Predictor™

ADMET Property Estimation and Model Building

QSAR Model Building

CYP Metabolite Prediction

R-Table Generation/Analysis

>140 Predicted Properties

Data Visualization

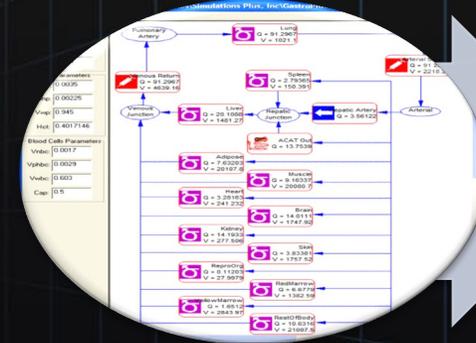

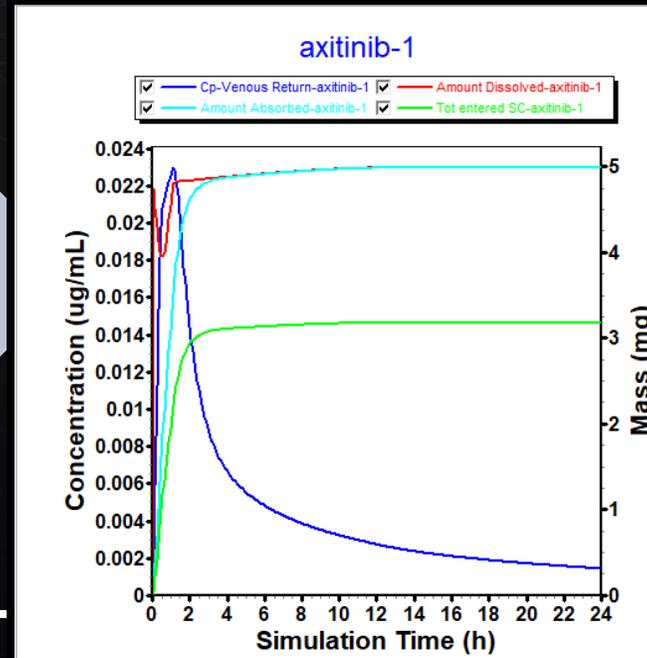

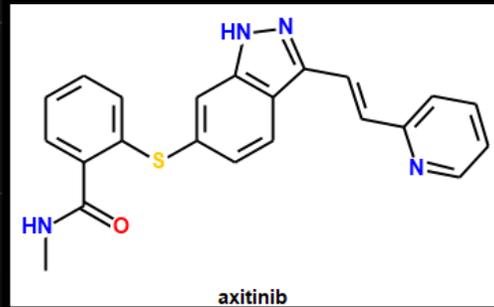

De novo Design

## SimulationsPlus

SCIENCE + SOFTWARE = SUCCESS

# Machine Learning + PBPK Marriage

Machine Learning Models

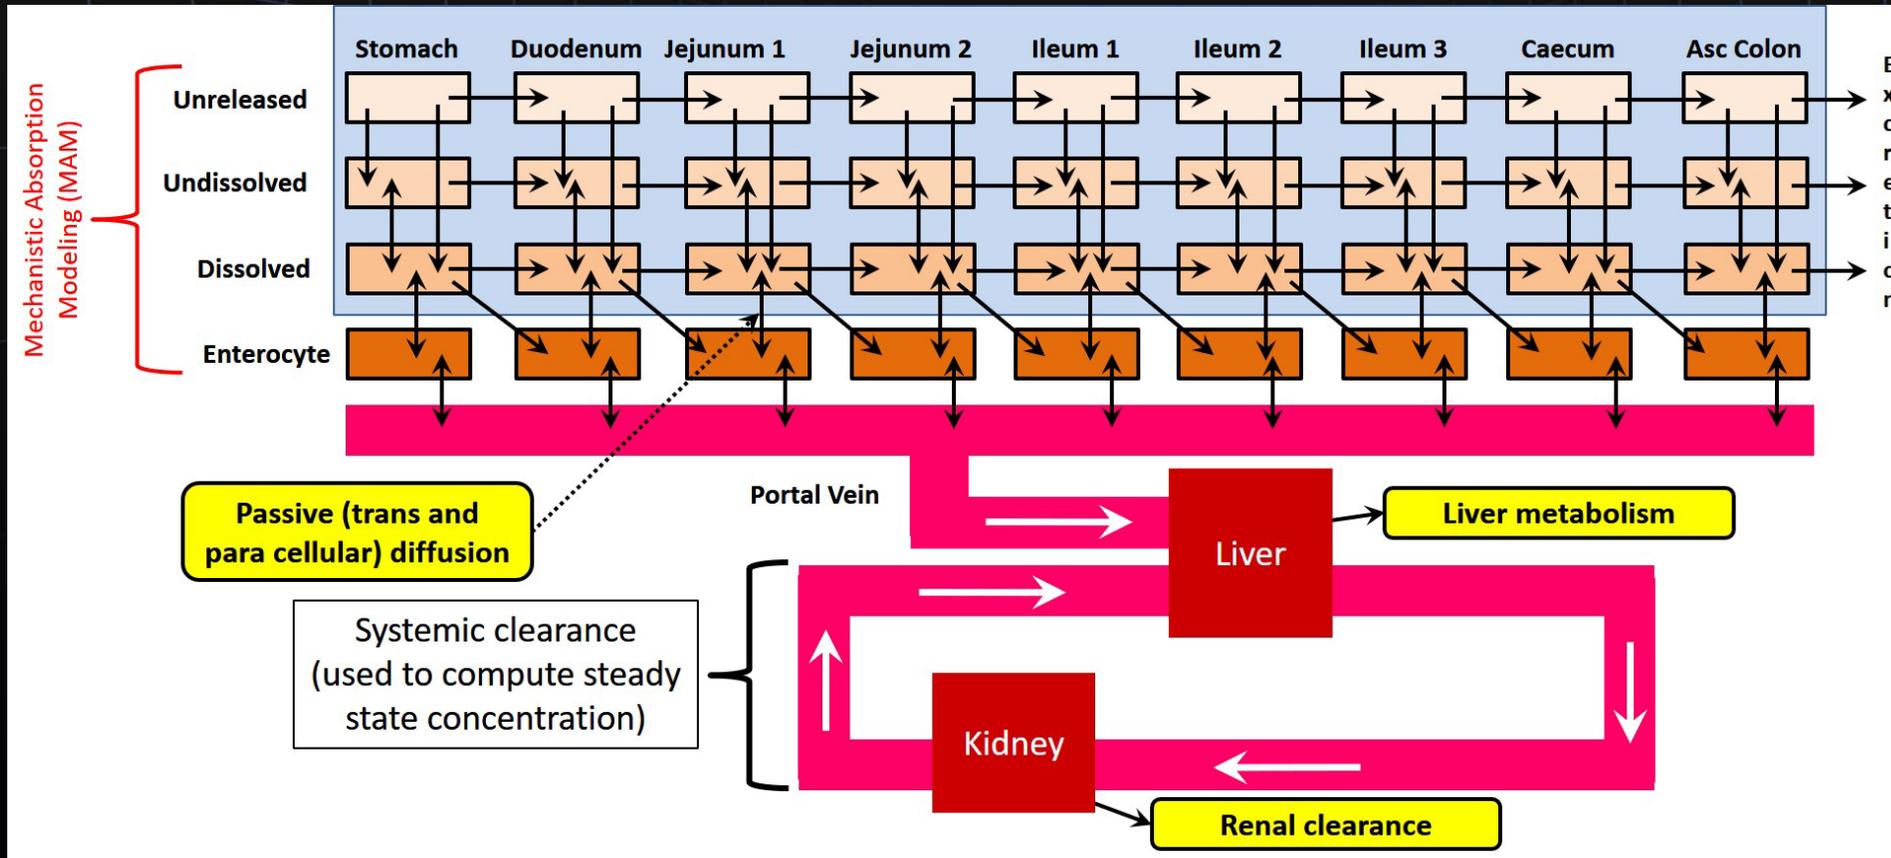

Physiologically-Based Pharmacokinetics (PBPK)

Goal: rapidly simulate absorption and systemic exposure based on 2D chemical structures

# Mechanistic HTPK Simulation

GastroPlus® ACAT™ Model\* + Compartmental (Minimal PBPK) Model

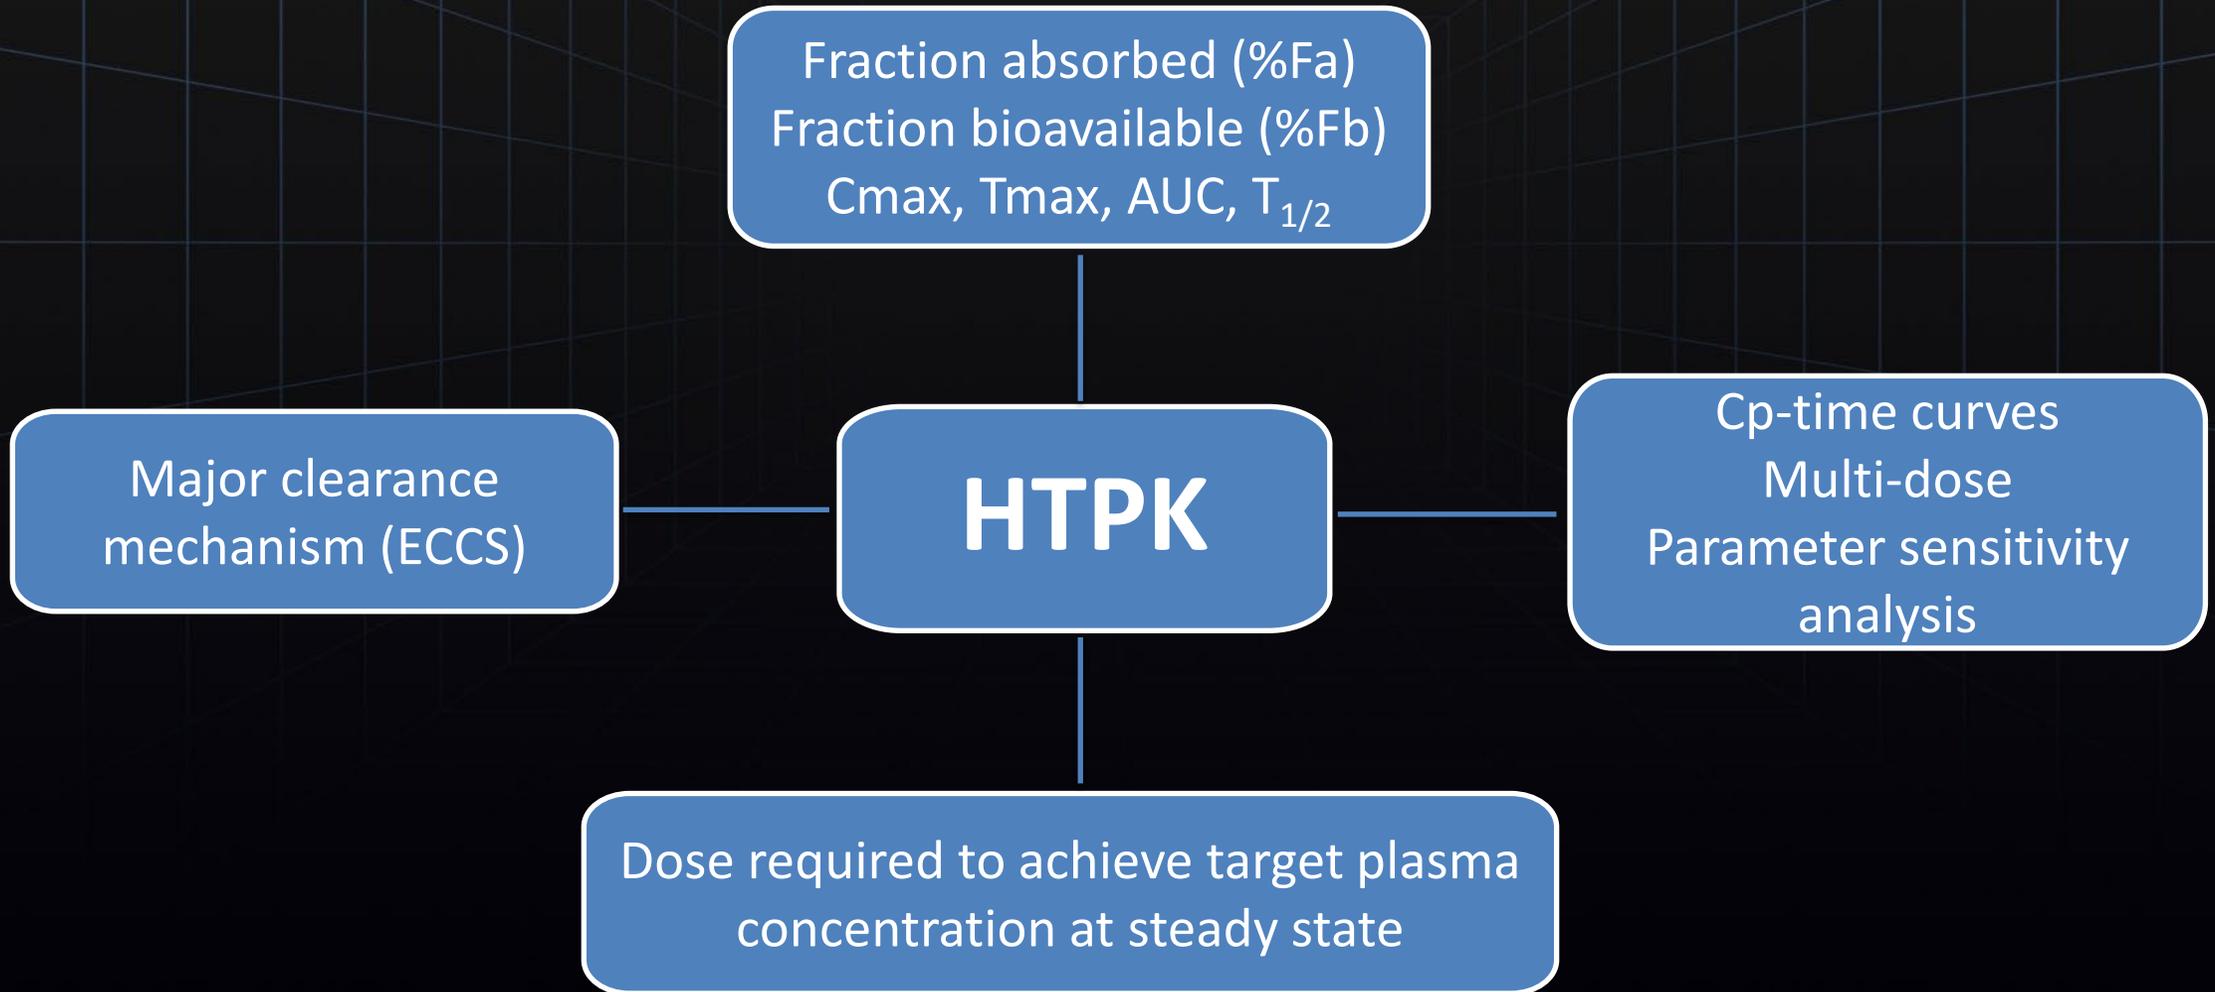

\*  
Advanced  
Compartmental  
Absorption and  
Transit Model

# High-Throughput PK - Vision

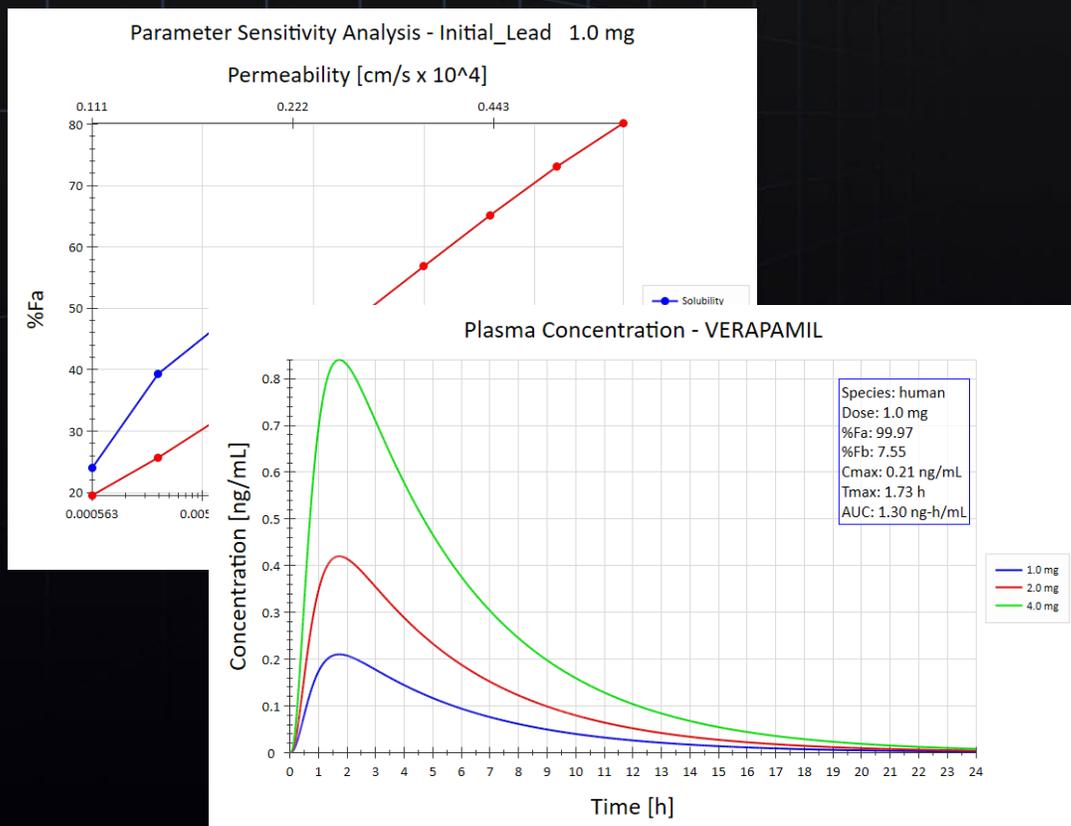

- Develop a simplified early PK assessment tool for non DMPK experts
- Identify potential development issues as early as possible, even before compounds are synthesized
- Fast-enough to incorporate mechanistic PK in AI-Driven compound optimization loops
- Provide dose and time-dependent modeling capabilities
- Avoid the need to input experimental values but allow their use if available.

# HTPK Predictions

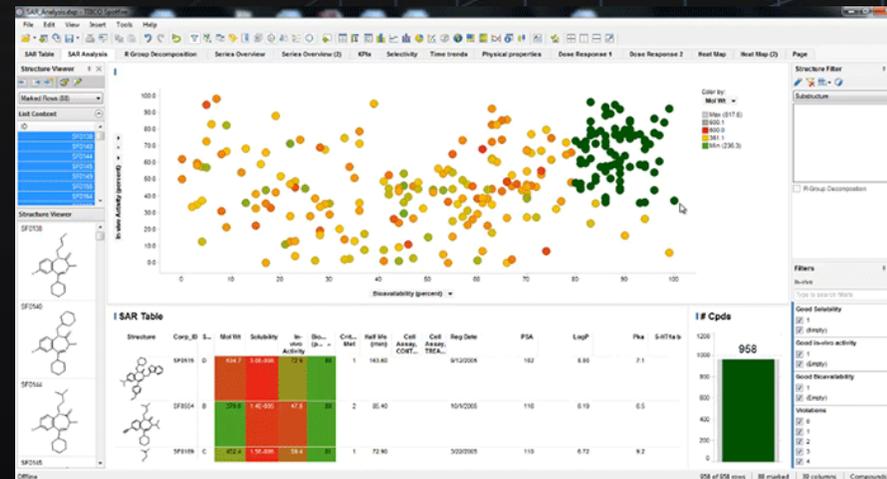

# HTPK Deployment

## Native ADMET Predictor®

## Alternate Front End - Spotfire

## Property Server Options

- Command-line access (Windows + Linux)
- Workflow platforms
  - Pipeline Pilot
  - KNIME
- **New REST API**

# Deployment at Roche

**Early assessment of PK properties using ADMET predictor HTPK Simulation Technology: Deployment of a high-throughput mechanistic PBPK approach at Roche**

*Dr. Andrés Olivares-Morales  
Roche Pharma Research and Early Development (pRED), Roche Innovation Center,  
Basel, Switzerland.  
21.04.2021*

# REST API - Vision

- Performance & Scope
  - Already running & available as a service
  - No start time vs command line
  - Jobs queued automatically
  - Access all model properties already in ADMET Predictor, including HTPK
  - Uses multi-threaded mode already available in ADMET Predictor
- Ease and Cost of Integration
  - Easier to integrate than command line wrappers
  - Maintain compatibility w/ command line syntax
- Licensing
  - Licenses checked out upfront
  - Avoid errors due to licenses not available in command line

# Integration in AI Platform

# Performance Benchmark

## Typical generation of 500 compounds per optimization cycle

- Ionization model: S+pKa models: 2.7 sec
- Solubility (S+Sw): 2.3 sec.
- %Fa from mechanistic HTPK at 10mg dose: 3 sec.

Calculation:

Dell Vostro 5471 – i7-8550U 1.80 GHz  
4 cores / 8 threads  
16Gb RAM – 64bits – Windows 10

# Conclusions

- Mechanistic High-Throughput PK
- Truly high-throughput and multi-threaded
- Rooted in industry-leading GastroPlus® technology
- Complete flexibility to define parameter inputs
- Multiple deployment options, including API
  
- In-house and collaborated validation
- Use and deployment examples already available (Roche and FDA)
