

KIWI™ 4

A cloud-based communication and collaboration platform

KIWI is the secure cloud-based, validated platform to efficiently and consistently organize, process, visualize, evaluate, and communicate modeling and simulation results for Pharmacometricians, PK/PD scientists, and engineers.

KIWI version 4 introduces the Model Wizard & Covariate Analysis toolset:

- Easily create *NONMEM*, *mrgsolve*, and *Berkeley Madonna* code from a library of templated PK and PK/PD models
- Intuitive point-and-click model setting selections
- Quickly customize template codes
- Automatically generate univariate control streams for stepwise covariate analysis
- Convenient side-by-side viewing and editing with the File Editor allow users to open 2 files simultaneously!

Improve your PK and PK/PD research with a winning solution –

- Customize dataset values labeled as “missing data”
- Add flags to document analysis results on data files

Robust Data Repository Updates –

- Improved Browser Explorer view
- Enhanced Staging Area view
- Administrators can rename drug/project/study folders

Do you need to significantly reduce the time spent creating models, correcting errors, and replicating program files for performing stepwise covariate analyses?

Get pharmacometricians back to focusing on advancing science, try KIWI today.
