

MonolixSuite™

A fast, easy-to-use, and powerful suite of applications for pharmacometrics analysis, modeling and simulation

PKAnalix™

NCA & CA analysis

Monolix™

NLME parameter estimation

Simulx™

Simulations

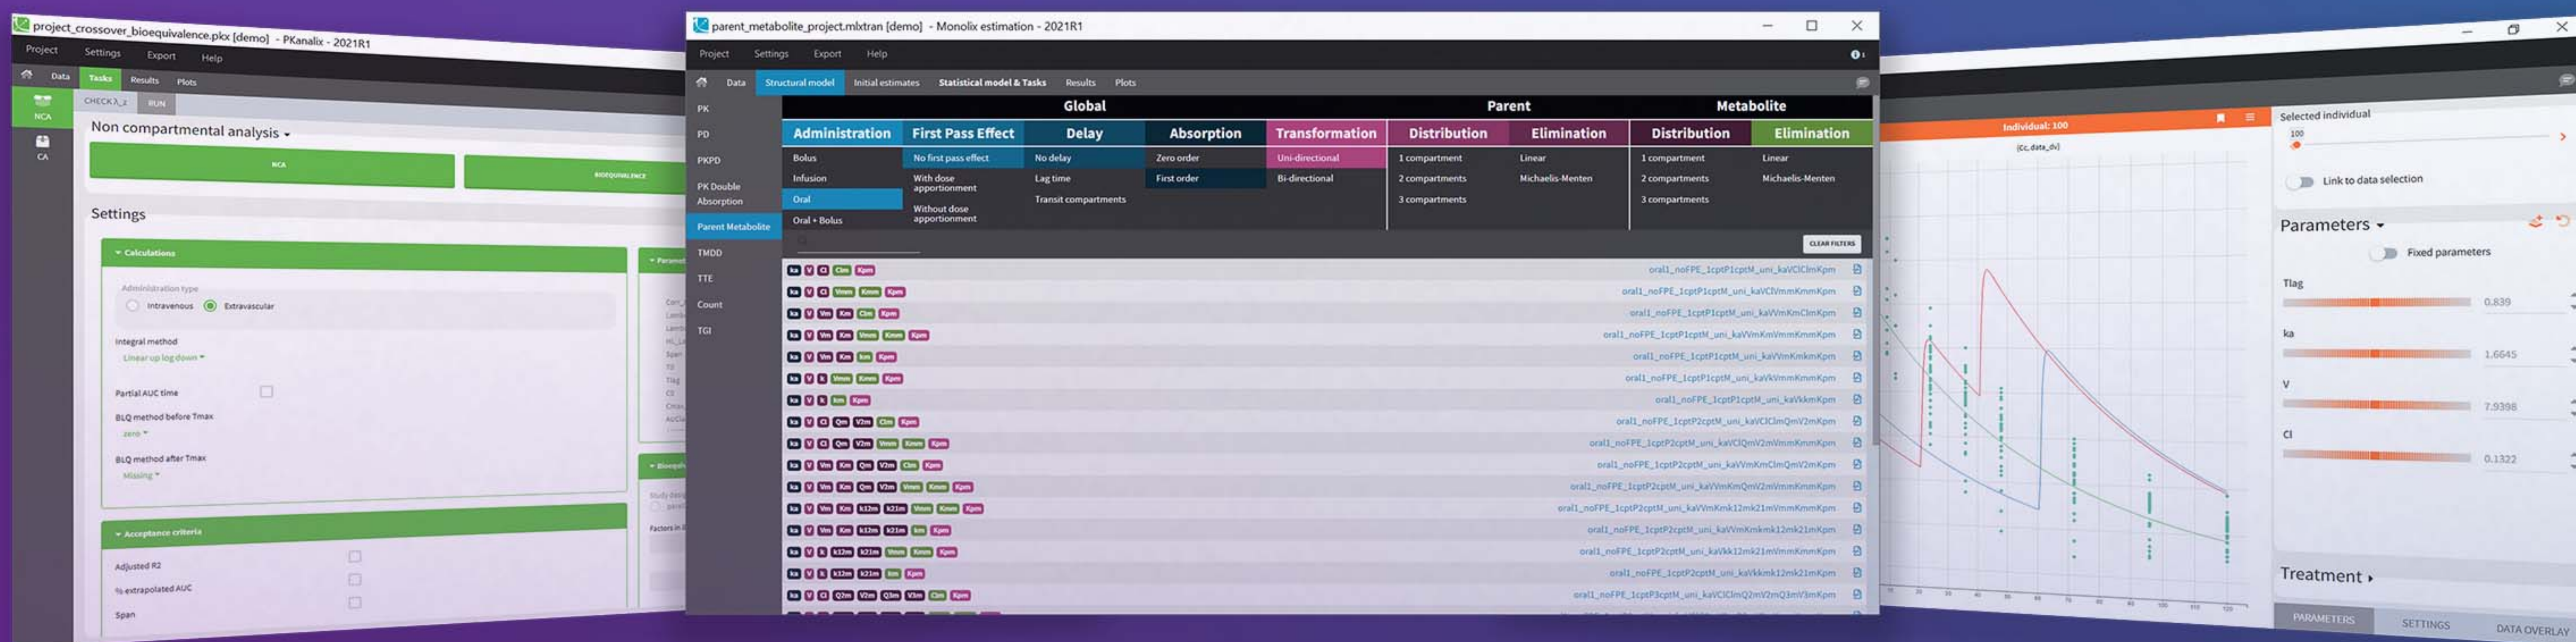

Built for Model Based Drug Development computing

Fully interoperable applications give you a complete modeling and simulation workflow from data visualization and non-compartmental analysis to population modeling and simulations.

Intuitive, effective, and offering the most advanced calculation capabilities.

What's **NEW!** in v2021?

- **NEW** bioequivalence module
 - **NEW** R functions to ease reporting
 - **NEW** parent-metabolite library
 - **FASTER** calculation in case of inter-occasion variability and parent-metabolites models
 - **NEW** generalized automatic initialization of parameters
 - **NEW** propagation of parameter uncertainty
- + more!**
