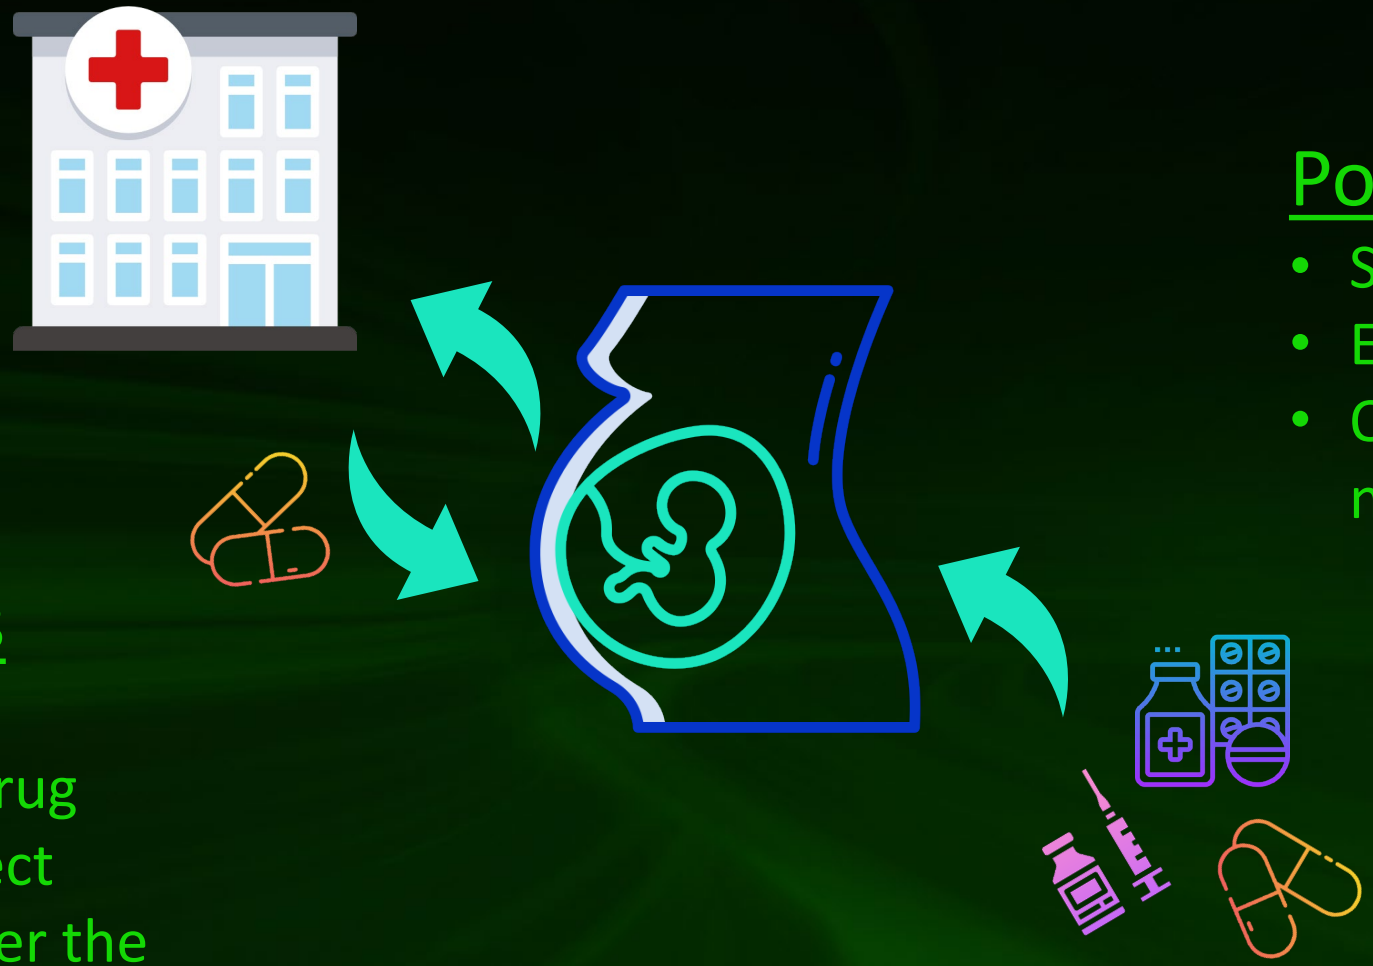
Pregnant women clinical information



Clinical Trials

- Safe
- Ethical if the drug provides a direct benefit to either the mom or the fetus

Post-marketing

- Safety concerns
- Ethical limitations
- Other approaches are necessary

Paracetamol

APAP = Paracetamol

"We recommend that APAP should be used by pregnant women cautiously at the lowest effective dose for the shortest possible time.
Long-term or high-dose use should be limited to indications as advised by a health professional."

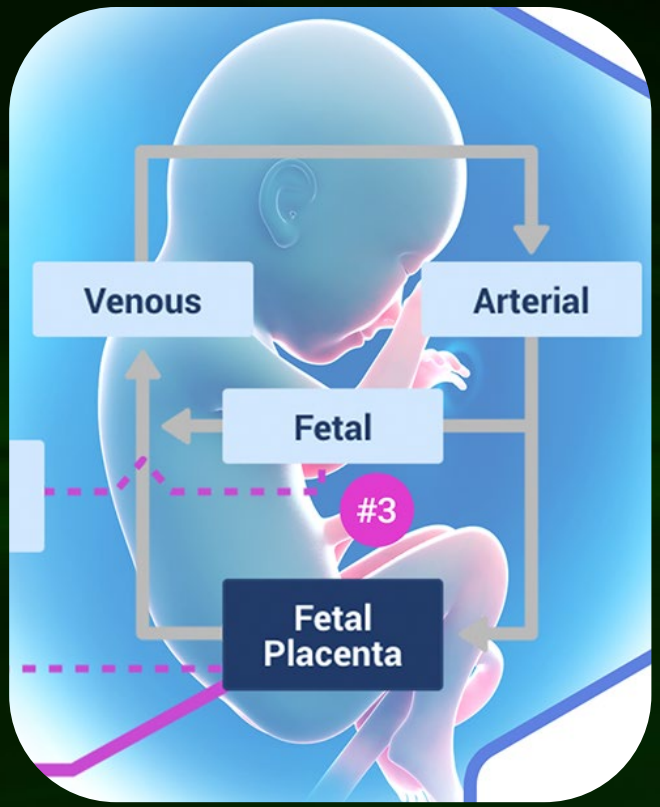
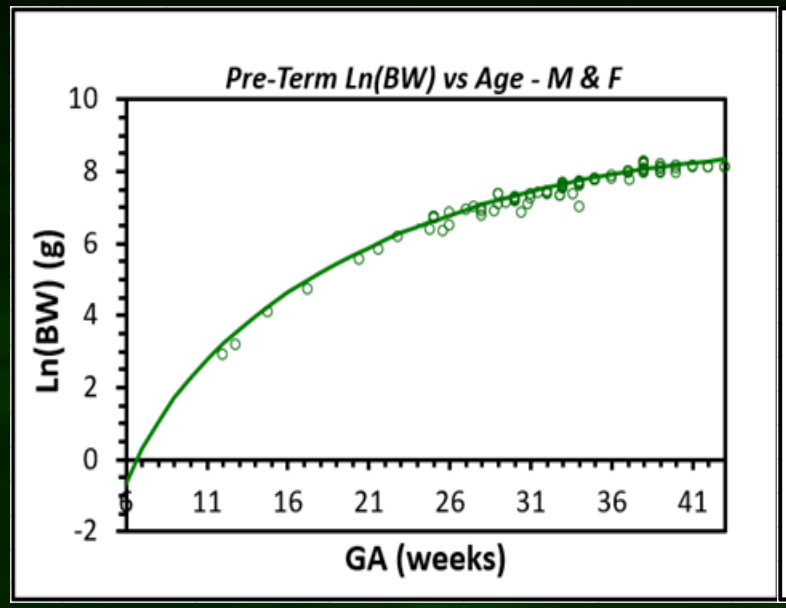
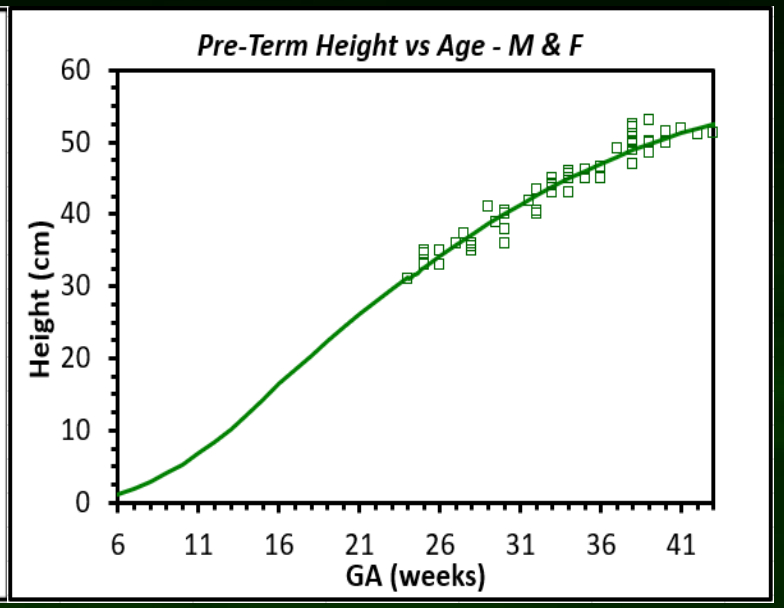
Fetal PBPK Model

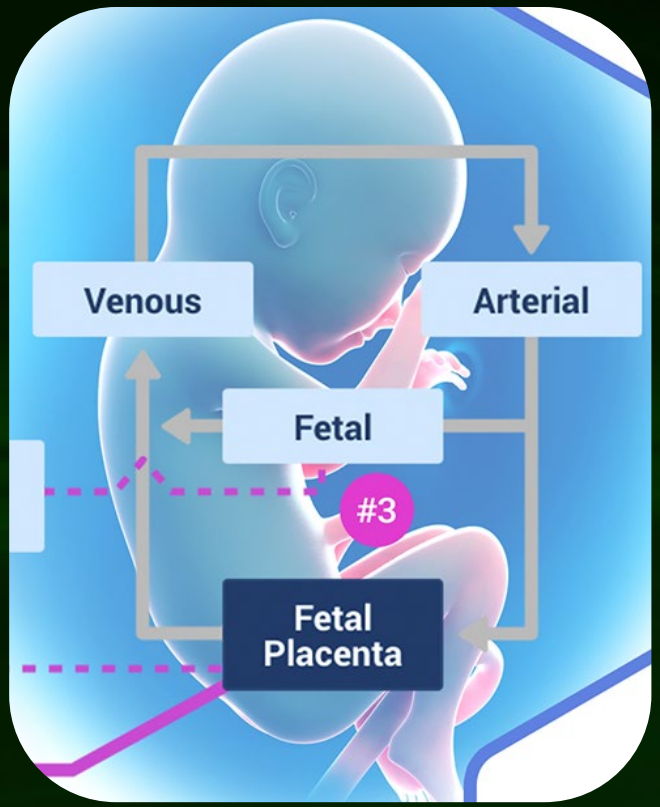


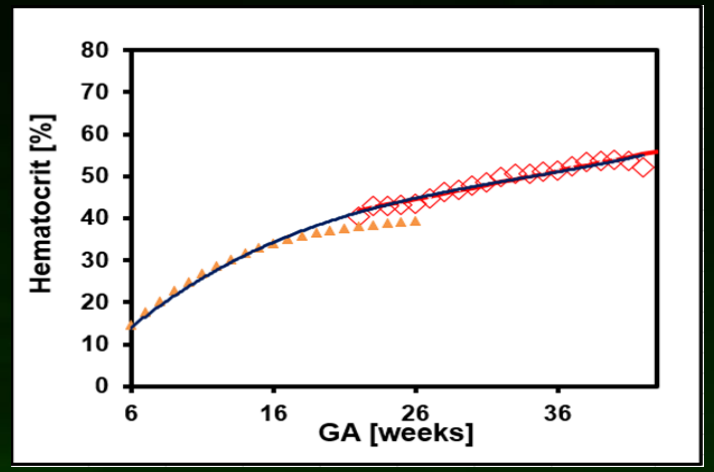


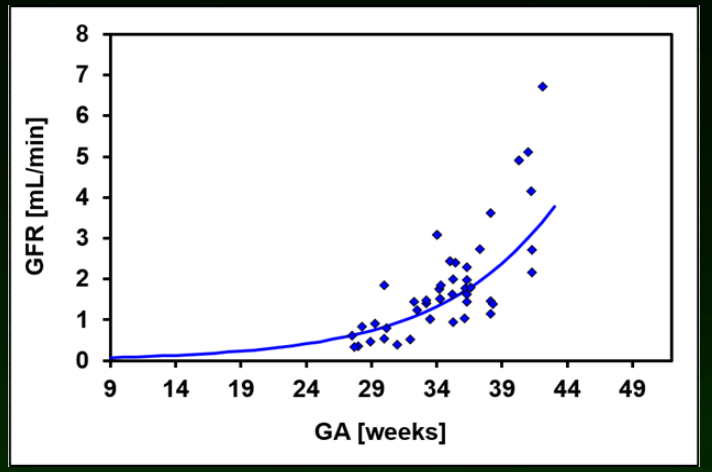


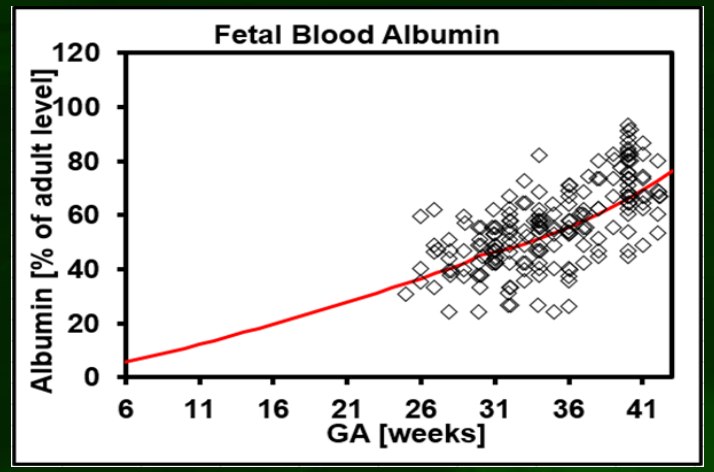
SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

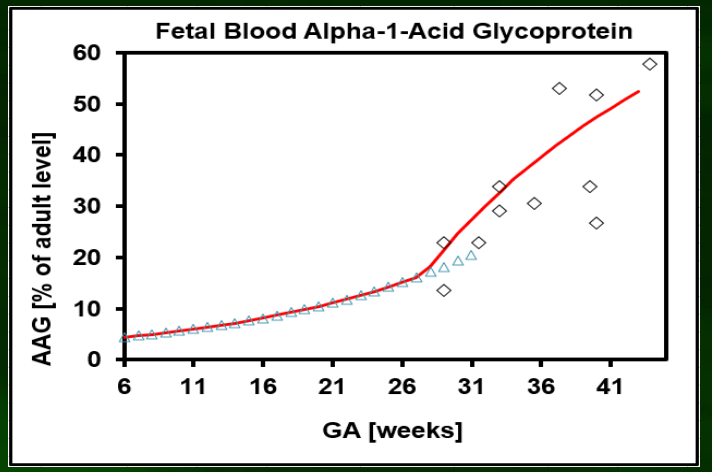
Fetal PBPK Model











SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

Maternal – Fetal Exchange

- Intramembranous pathway

rapid movement of water and solute that occurs between amniotic fluid and fetal blood within the placenta and membranes

➔ **Disappears after skin keratinization (GA 20)**

- Transmembraneous pathway

movement of water and solute between amniotic fluid and maternal blood within the wall of the uterus

➔ Important in early gestation

- Fetal pathway

Movement of water and solute between amniotic fluid and fetal organs

➔ Starts between the 9th and 12th GA

- Transplacental pathway

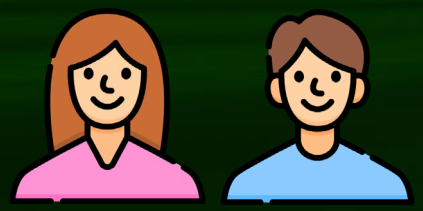
Cefuroxime

Model development and validation

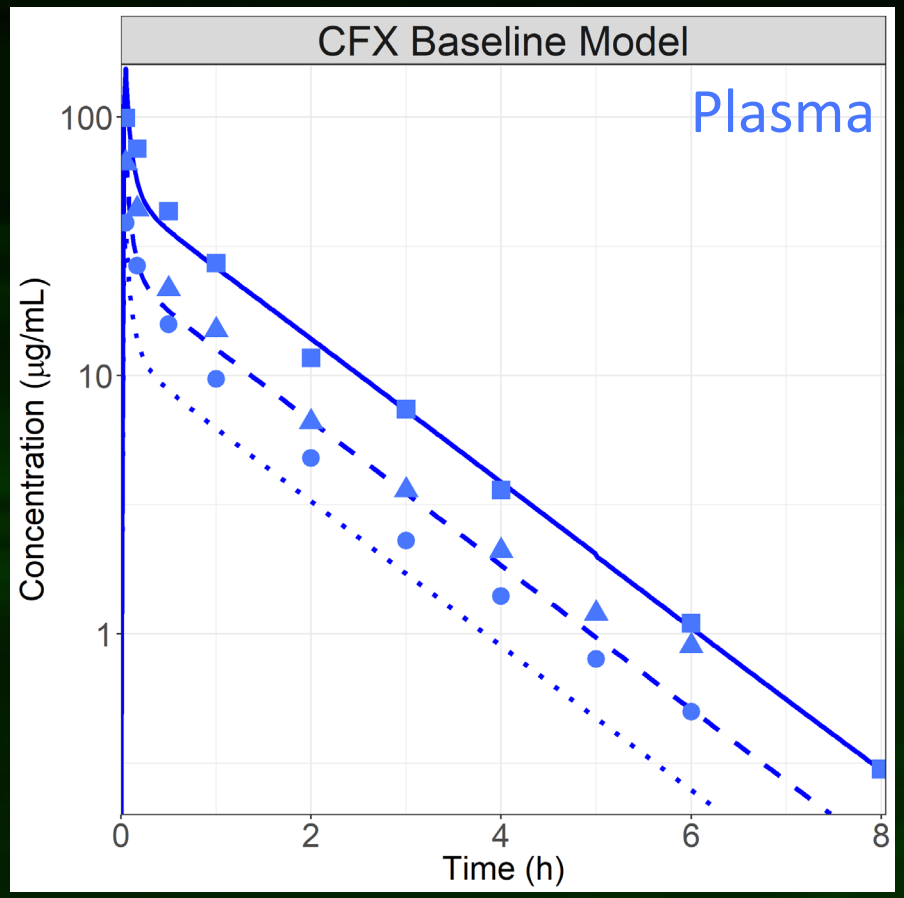


Model adjustments Postpartum

Pregnancy prediction

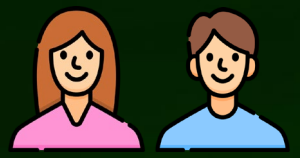
SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

Cefuroxime



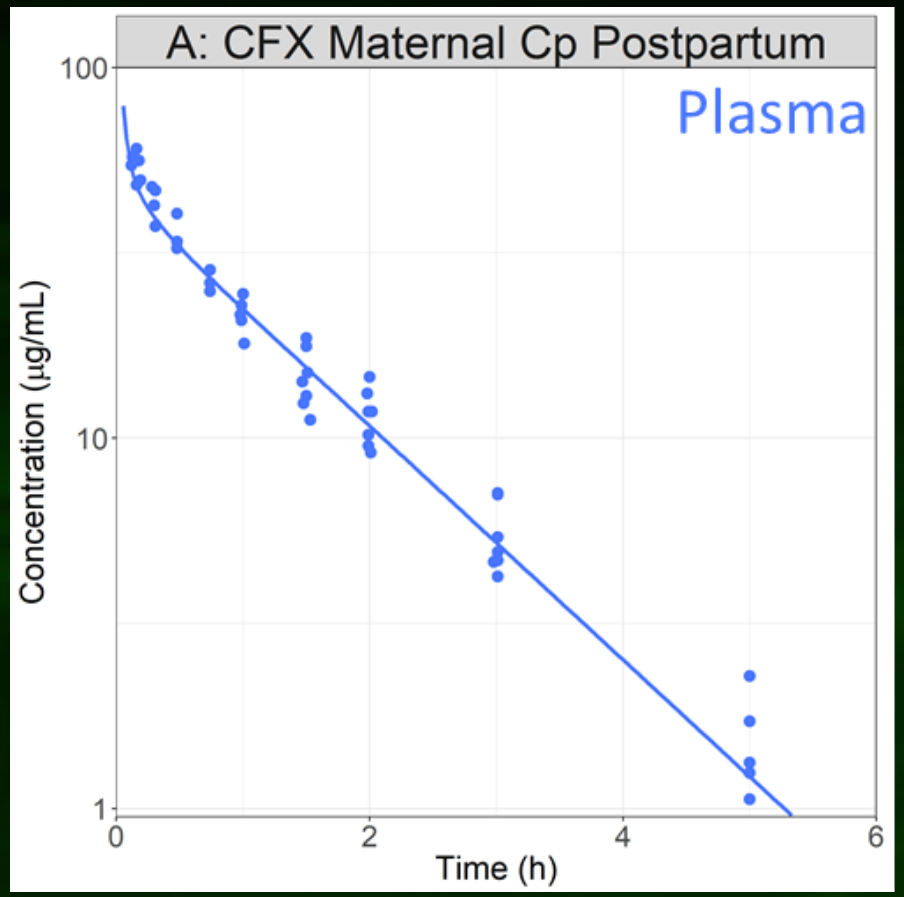
- CFX is cleared by renal filtration and active secretion
- All tissues defined as perfusion limited except the kidney
- Kidney secretion mediated by OAT3 and MRP4. Vmax parameters were fitted

➔ **PBPK model can reasonably described the observed concentration following IV administration at 3 doses**



SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

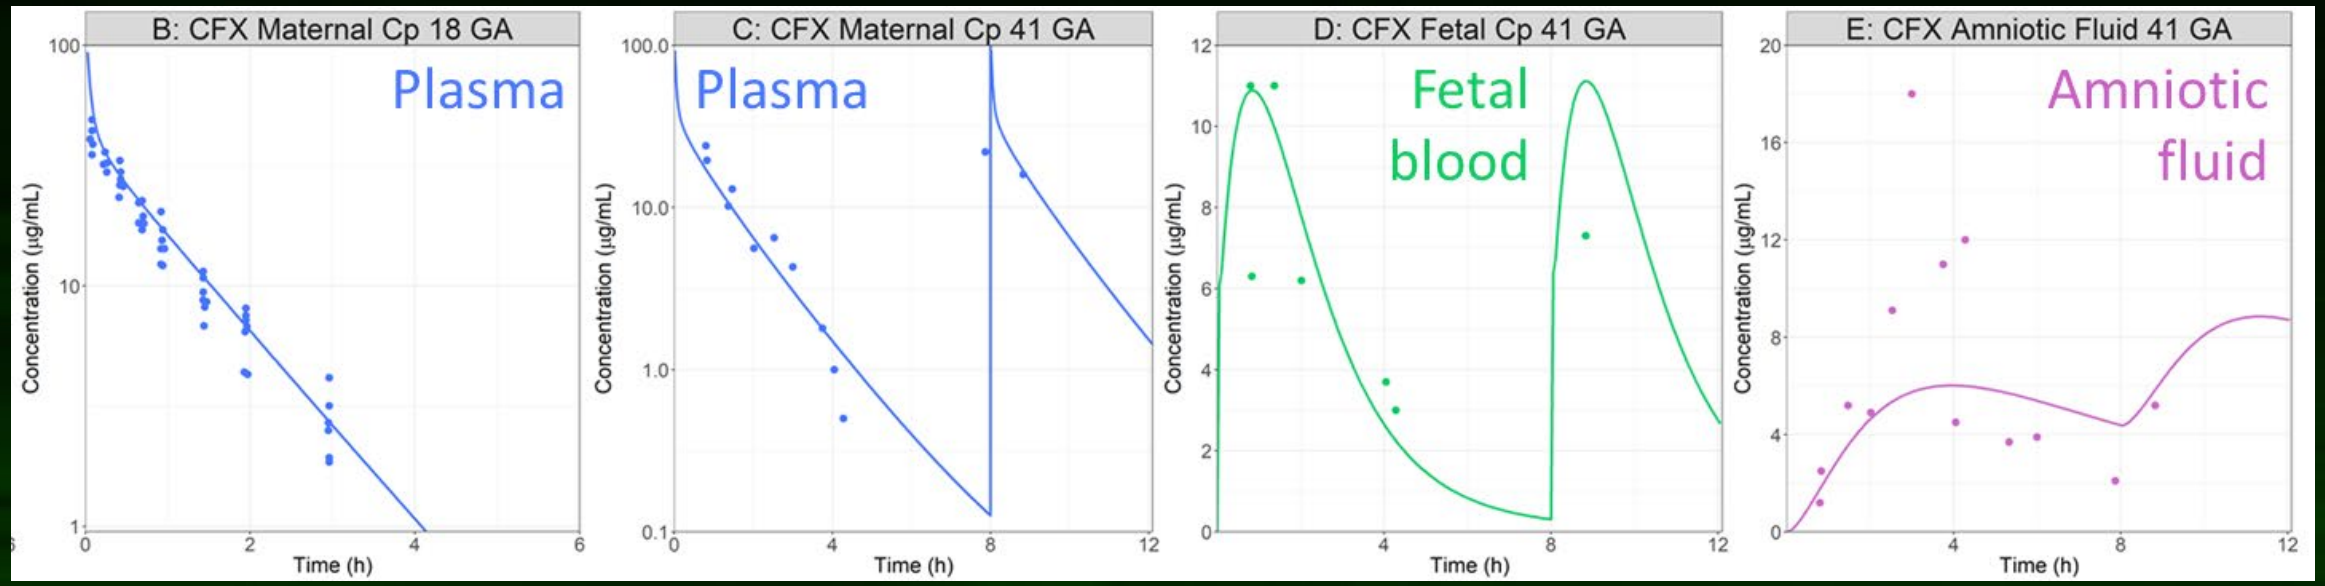
Cefuroxime



- Transporters Vmax parameters were adjusted to capture the urinary excretion data

➔ **PBPK model can reasonably described the observed concentration following IV administration in Postpartum subject**

Cefuroxime



- Placenta model was changed to permeability limited

➔ PBPK model can reasonably described the observed maternal and fetal concentrations following IV administration

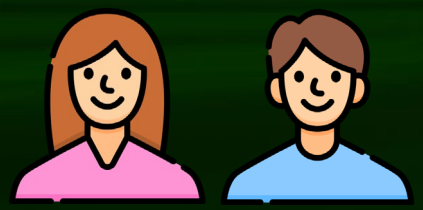
Metronidazole

Model development and validation

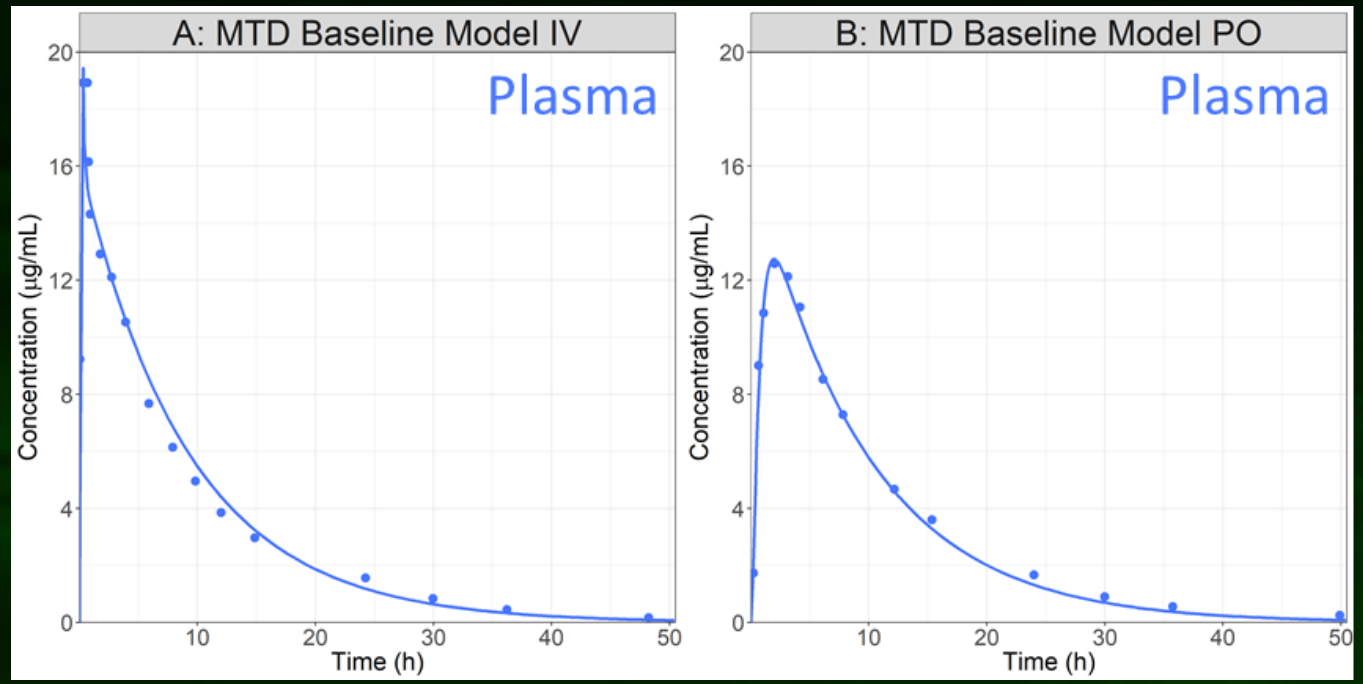


Model adjustments Postpartum

Pregnancy prediction

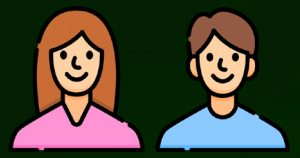
SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

Metronidazole



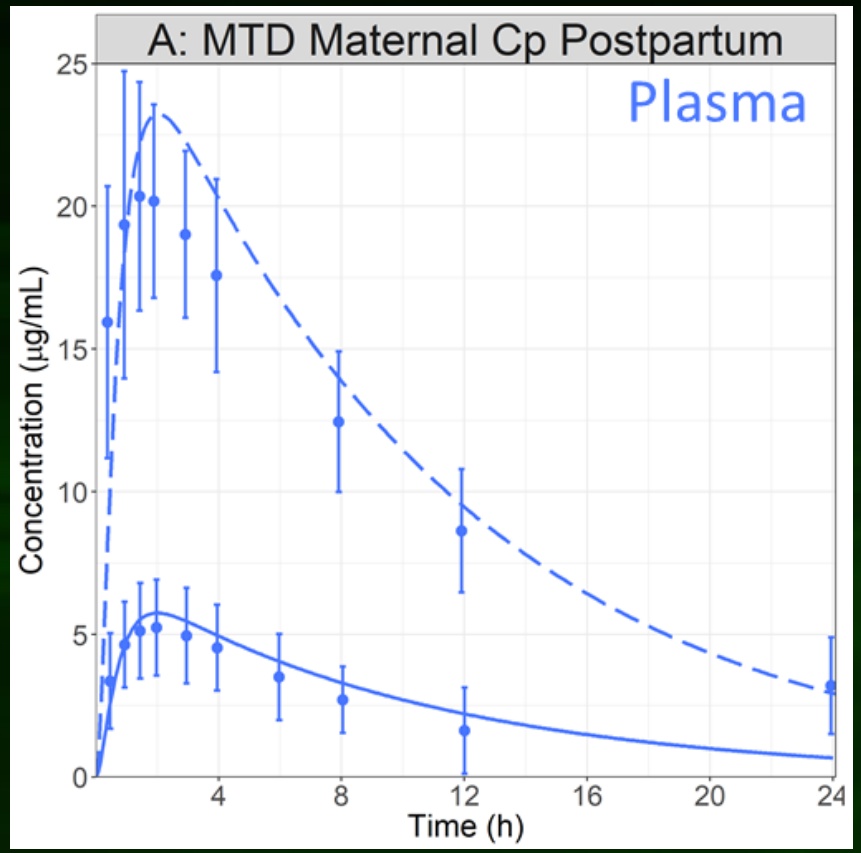
- MTD is metabolized by the CYPs 3A4, 2A6, 2E1 and UGT
- All tissues defined as perfusion limited

➔PBPK model can reasonably described the observed concentration following IV/PO administrations.



SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

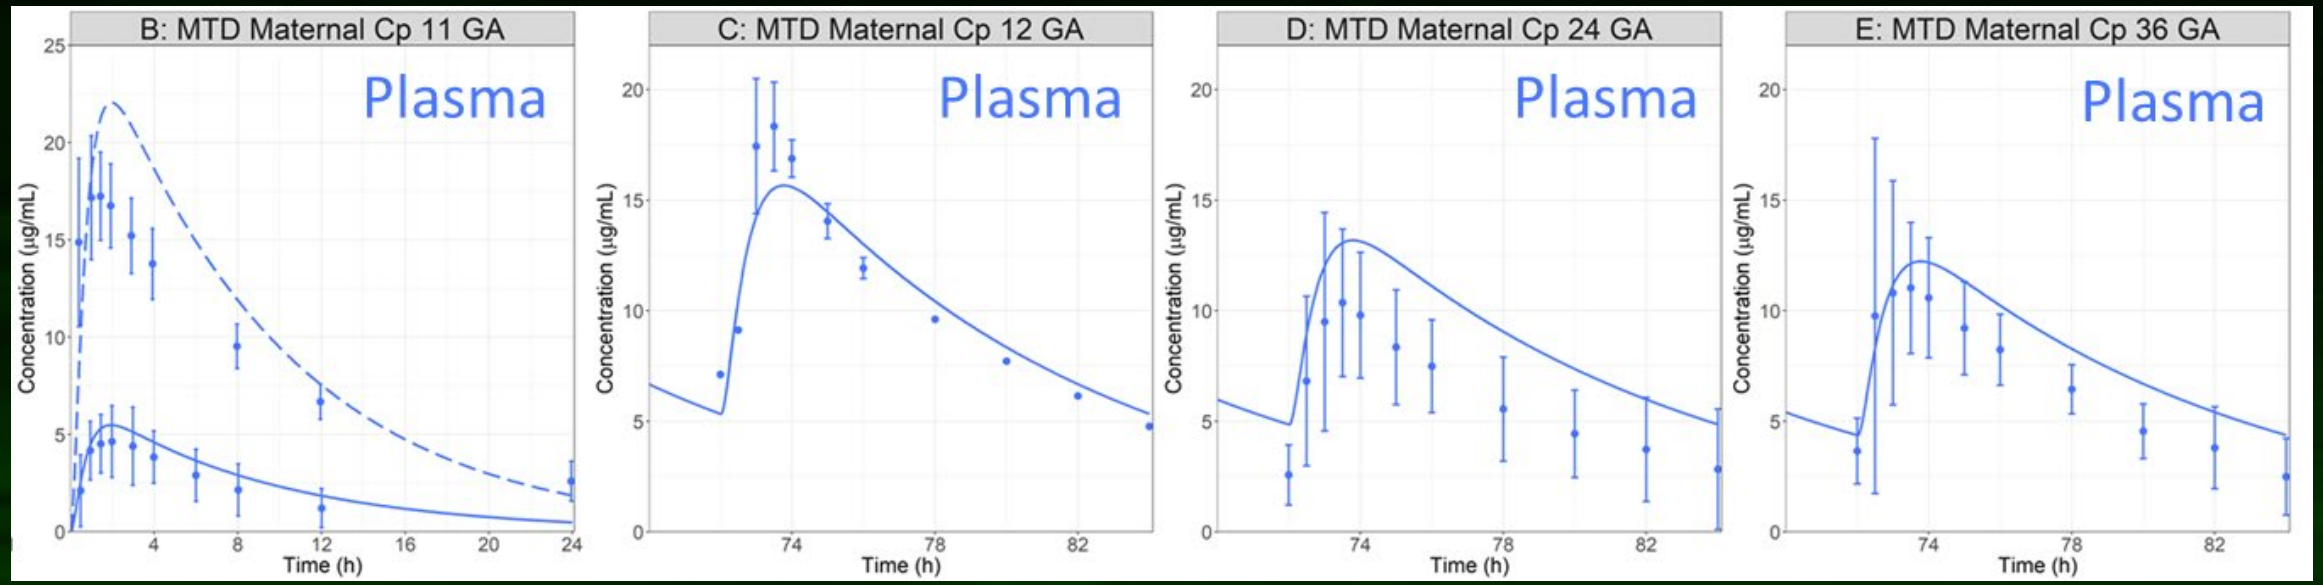
Metronidazole



- No model adjustment was made based on Postpartum data at 2 doses (0.25/1g PO)

➔ PBPK model can reasonably described the observed concentration following PO administration in Postpartum subject.

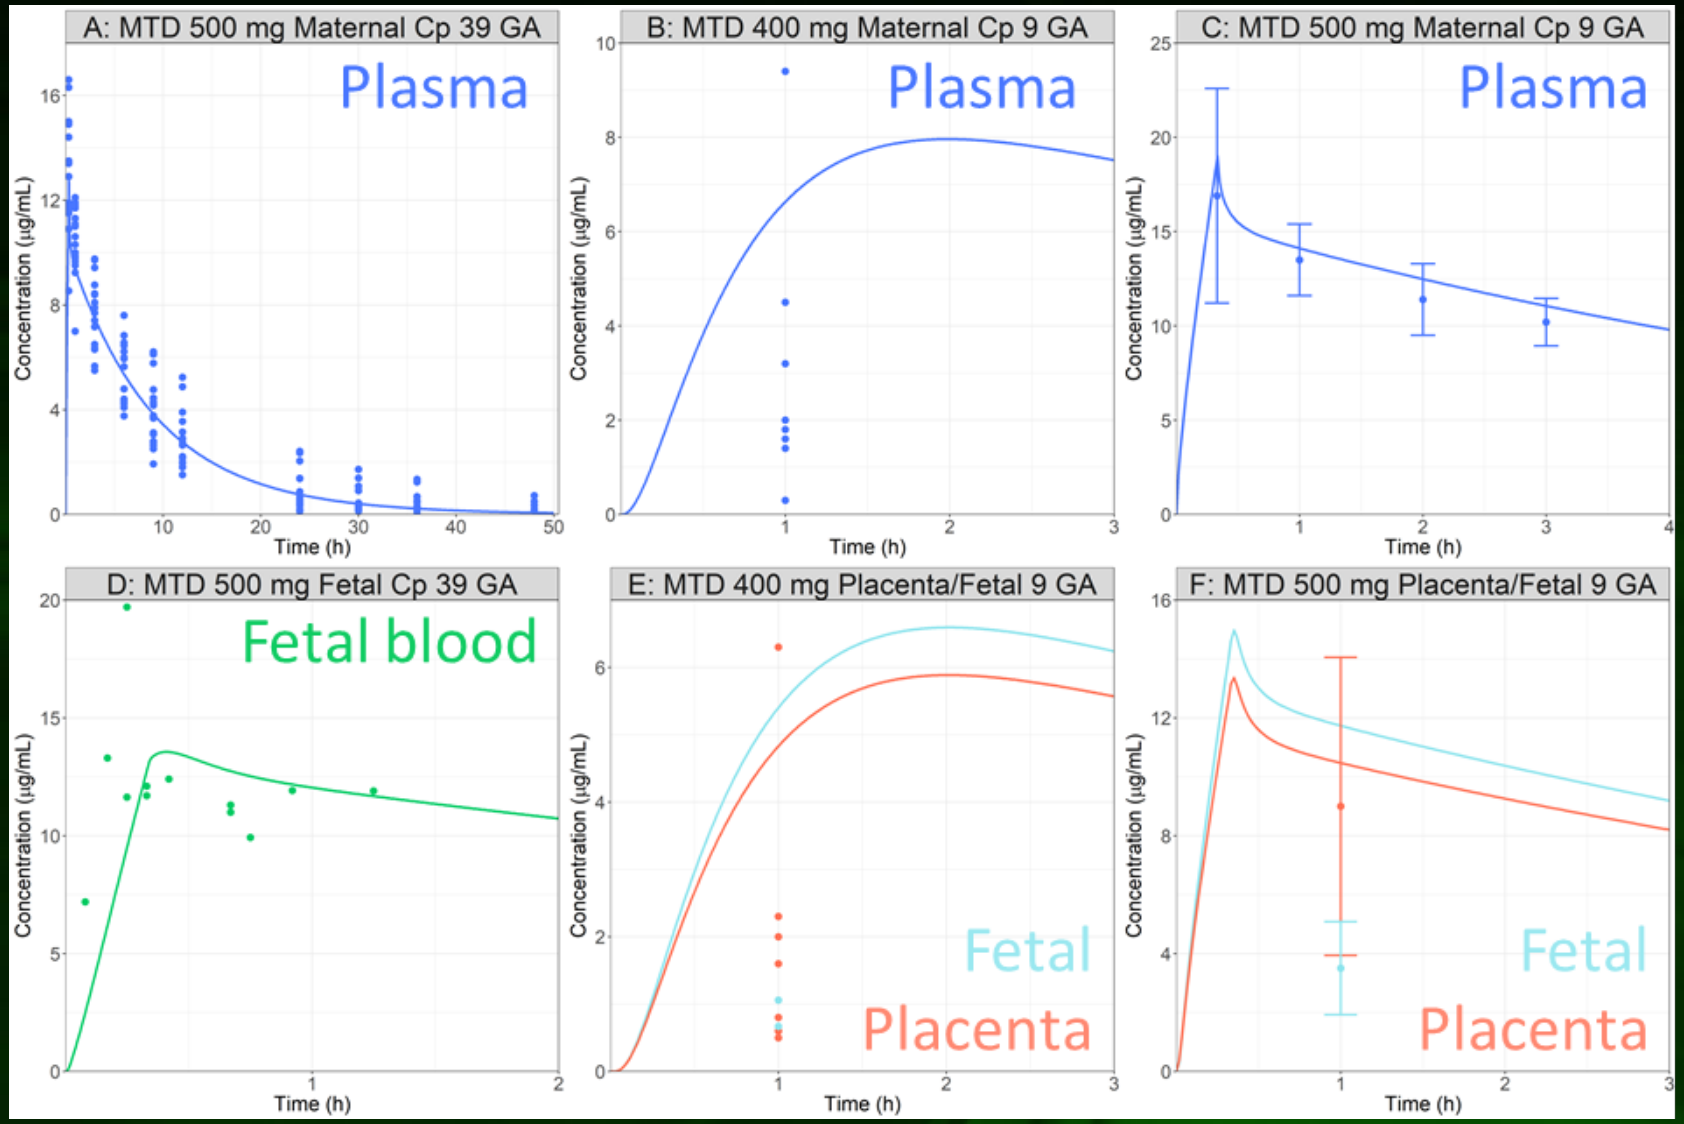
Metronidazole



➔ PBPK model can reasonably described the observed maternal Cp-time concentrations following PO administration at different stages of pregnancy

SimulationsPlus
SCIENCE + SOFTWARE = SUCCESS

Metronidazole



Summary

- Ethics and safety concerns exist for Pregnant populations
- Pregnancy PBPK models can predict maternal and fetal PK/exposure
- Postpartum data may be interesting to calibrate the PBPK model
- Placenta model structure is probably dependent of the molecule of interest
