

Installation Instructions for ADMET Predictor™ 9.5 Using a Local License

Before you begin

In order to install ADMET Predictor®, you must have Administrative privileges.

During the ADMET Predictor installation process, a file named SLP_HOSTID_Info.txt will be created on your desktop. This file needs to be emailed to <u>licensing@simulations-plus.com</u> in order to create your license file. We will generate a license file (LicenseFile.lic) that is specific to your computer. The file will be emailed to you and needs to be imported into the Flexera licensing system in order to run the ADMET Predictor. The directions for importing the file are at the end of this document.

If a previous version of our software was installed then the "simplus.exe" daemon needs to be replaced with the version included in ADMET Predictor 9.5 installation files. This is discussed below in the section "New version of the simplus.exe daemon".

Installation

The first step in the process is to extract the files from the "AP95-Install(x64).zip" file. Right click on the "AP95-Install(x64).zip" file and select "Extract All...". The dialog box below will appear. Accept the default destination folder and click on "Extract".

In the "AP95-Install(x64)" directory, double click on the "setup.exe" icon:

This will bring up the dialog box below. Click on the "ADMET Predictor 9.5" button.

The program will install the "Microsoft Visual C++" redistribution package if the required dependencies do not exist on your system. Please install this package by clicking on the "Install" button.

Once the dependencies have been installed, the installation process will continue. The ADMET Predictor installation wizard will begin with the dialog box below. Click "Next >".

Check the "Start server now" option and click "Next". The installer will attempt to start the licensing server.

SCIENCE + SOFTWARE = SUCCESS

When the server starts, a browser window will open (below). You should see "FlexNet Publisher" in the top left corner. If a browser window did not open, the server may need to be started manually. A one-time reboot of your system after completing the ADMET Predictor installation will usually solve this. The server will start each time your machine boots up.

Click on "Done" to complete the Flexera License Server install.

Simulations Plus, Inc. (NASDAQ: SLP) 42505 10th Street West | Lancaster, CA 93534 | United States Office: +1-661-723-7723 | Fax: +1-661-723-5524 | <u>sales@simulations-plus.com</u> | <u>www.simulations-plus.com</u>

InstallShield	ancel

SCIENCE + SOFTWARE = SUCCESS

The dialog box below will be displayed, once the installation is finished. We generally recommend reading the "Readme" file because it contains information about the current release version. If this is a "fresh" installation of ADMET Predictor then the license file probably hasn't been imported into the Flexera licensing system. Thus, "Launch ADMET Predictor" should be "unchecked". Then click on "Finish" to complete the installation.

ADMET_Predictor 9.5(x64) - Inst	tallShield Wizard
	InstallShield Wizard Complete The InstallShield Wizard has successfully installed ADMET_Predictor 9.5(x64). Click Finish to exit the wizard. View Readme Launch ADMET Predictor
	< Back Finish Cancel

ADMET Predictor 9.5 is now installed on your machine.

New version of the simplus.exe daemon

Simplus.exe is a daemon that communicates with "lmadmin" to manage licenses. ADMET Predictor 9.5 will only work with the new version (v11.15) that is included in the "AP95 Install(x64).zip" file. The new file is \sim 2.6 Mb and has the properties listed below:

SCIENCE + SOFTWARE = SUCCESS

🔳 simplus.exe Pro	operties	\times
General Compatib	ility Security Details Previous Versions	
Property Description	Value	
File description Type	Licensing Daemon x64 v11.15 Application	
File version Product name	1.5.0.0

Date modified	2/4/2019 3:19 PM English (United States)	
Language		
Remove Properties	s and Personal Information	
	OK Cancel Apply	/

The "Imadmin" service needs to be stopped in order to replace "simplus.exe". To stop "Imadmin", enter "Windows + R", type "services.msc", and click on "OK". Scroll down to "Imadmin" in the "Services" window, right click, and select "Stop". Rename "simplus.exe" in "C:\Program Files (x86)\FlexNet Publisher License Server Manager" to "simplus.exe-old". Copy simplus.exe in the "AP95_Install(x64)\Vendor Daemon" directory to " "C:\Program Files (x86)\FlexNet Publisher License Server Manager". The final step is to restart "Imadmin" by right clicking on it in the "Services" window and selecting "Restart".

Importing the license file into Flexera

The "Imadmin" service must be running in order to start the Flexera graphical user interface. Use "Windows + R key", type "services.msc", and then click on the "OK" button to start the services interface. Scroll to "Imadmin" and make sure that it is started.

Open an internet browser such as Internet Edge or Chrome. Type <u>http://localhost:8090</u> into the address window and hit the return key. The dialog box below will appear. Click on "Administration" in the upper right hand corner.
