

DDDPlus™

Simulation software for the *in vitro* dissolution experiment of pharmaceutical dosage forms

DDDPlus™ is the industry's leading mechanistic *in vitro* dissolution software for formulation and analytical scientists. With DDDPlus, you can model and simulate the *in vitro* dissolution of active pharmaceutical ingredients (API) and formulation excipients under various experimental conditions in seconds, and begin making informed decisions to help improve your chances for success.

What's new in DDDPlus version 6?

- Mechanistic Artificial Stomach-Duodenum model
- *In vitro* dissolution apparatus models for improved IVIVE of precipitation kinetics with GastroPlus®
 - Biphasic dissolution
 - Membrane dissolution
- Controlled release and long acting injectable dosage form models
