

GastroPlus® 9.9

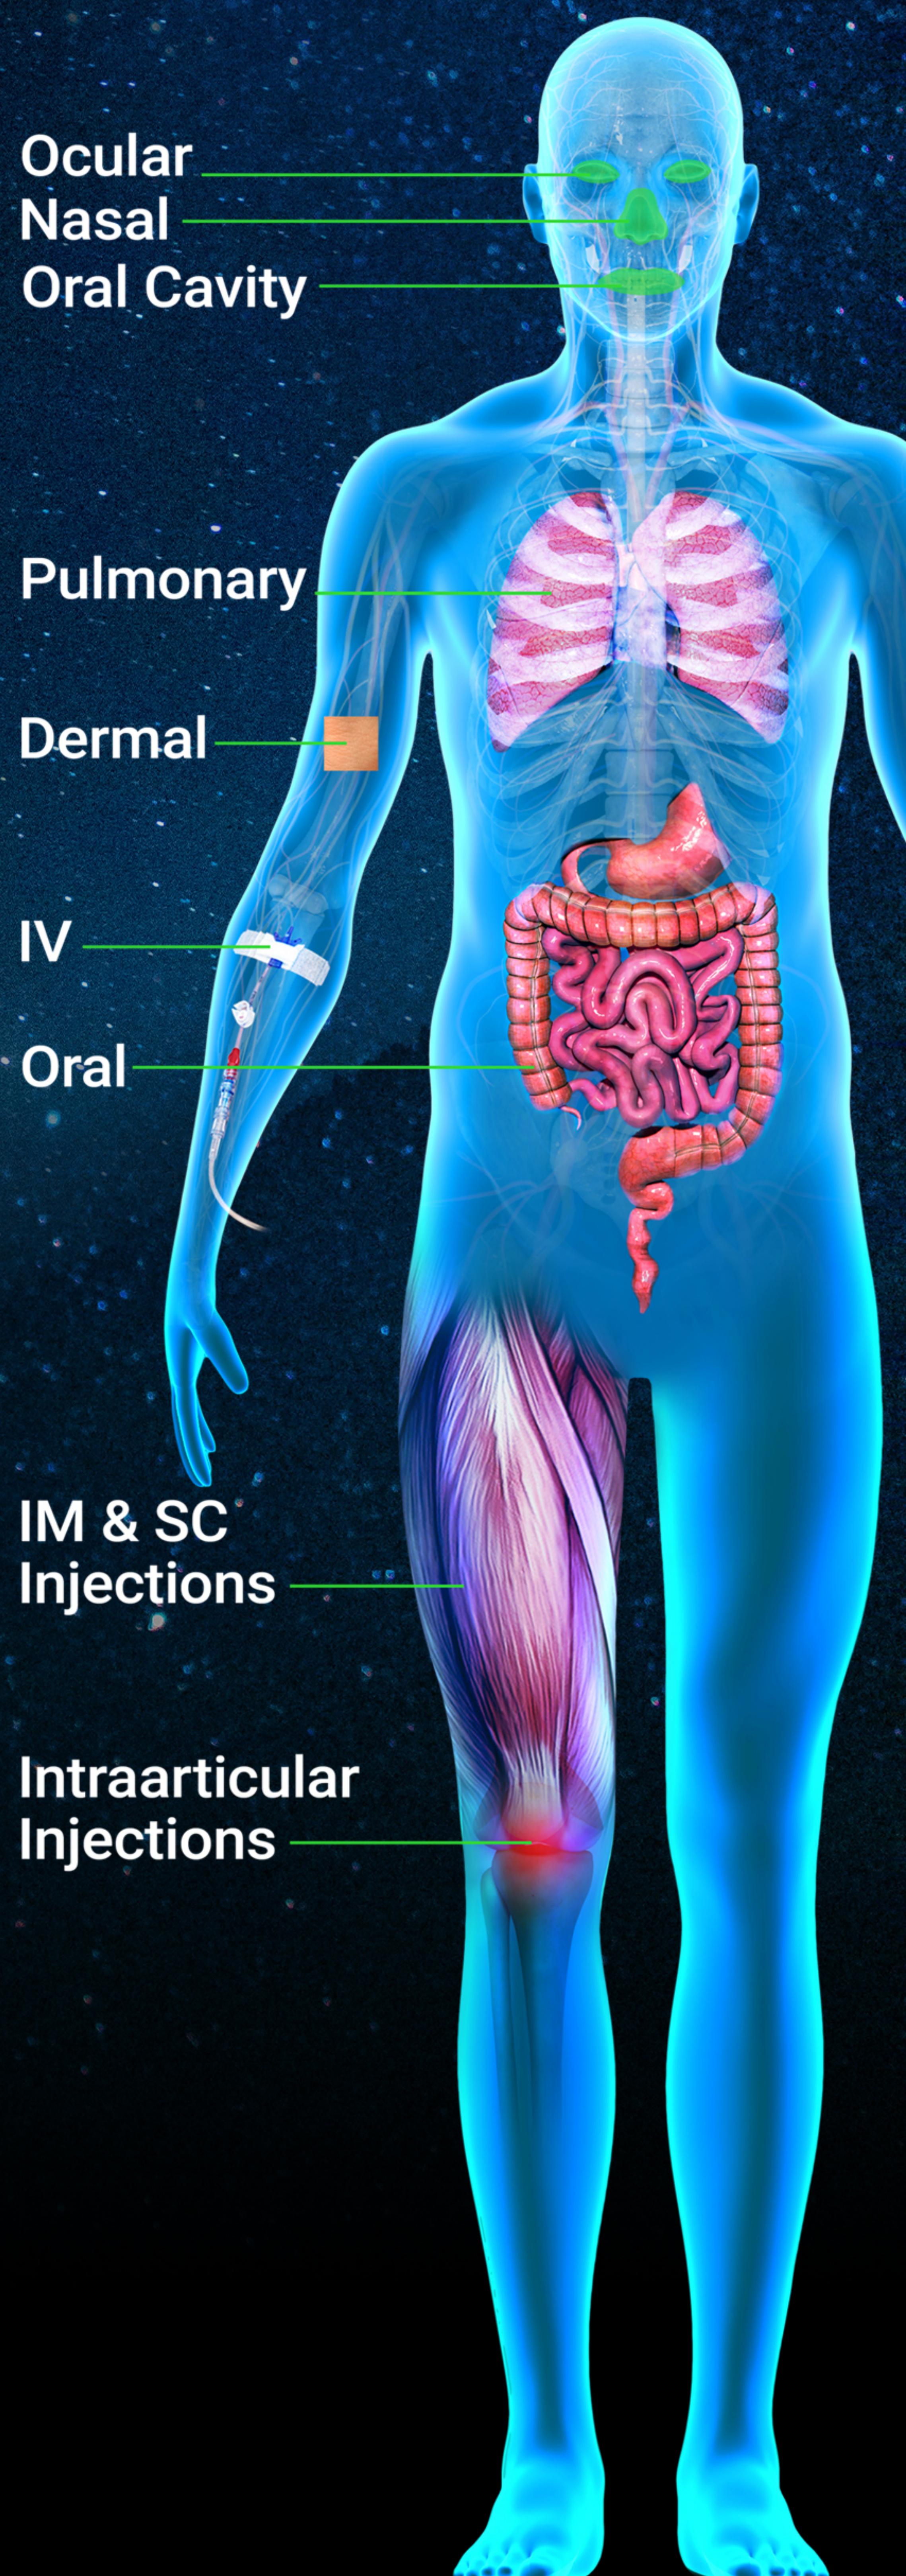

Take your PBBM/PBPK research to new heights.

What's GastroPlus?

GastroPlus is a mechanistically based simulation software package that simulates intravenous, oral, oral cavity, ocular, inhalation, dermal, subcutaneous, and intramuscular absorption, biopharmaceutics, pharmacokinetics, and pharmacodynamics in humans and animals. This smoothly integrated platform combines a user-friendly interface with powerful science to help you make faster and more informed project decisions!

What's **NEW!** in 9.9?

- **EXTENDED** ACAT™ model minimizes the need for animal & human studies during new formulation approach evaluations for GI diseases
- **IMPROVED** Biologics module mimics study designs to support optimization of dose and regimen for clinical trial success
- **NEW** and updated models in the ADMET Predictor® module strengthen early DDI risk assessment capabilities
- **ENHANCED** oral cavity, dermal, and ocular PBPK models provide deeper and more accurate insight into major processes at sites around the body
