

AssessmentsPlus™

The AssessmentsPlus module in GastroPlus® provides structured, expert-guided evaluation of your PBPK and PBBM models.

What is the AssessmentsPlus module?

AssessmentsPlus allows you to leverage hundreds of years of collective expertise and experience from leading scientists, embedded to provide you with real-time evaluation and analysis from setup through simulation interpretation. Whether you're a new user who wants coaching or a seasoned modeler looking for increased confidence in your model, AssessmentsPlus can help you evaluate model assumptions, identify gaps, and interpret simulation outcomes.

The ability to systematically assess and interpret models provides several benefits for pharmaceutical companies:

- ✓ Explore model assumptions across absorption, distribution, metabolism, and excretion (ADME) before running simulations
- ✓ Identify gaps, inconsistencies, and opportunities to improve model performance
- ✓ Understand mechanistic drivers of simulation results and alignment with observed data
- ✓ Improve confidence in PBPK and PBBM models used to support regulatory and internal decisions
- ✓ Reduce trial-and-error by applying structured, expert-guided feedback throughout model development

AssessmentsPlusAI extends these capabilities with optional AI-driven insights:

- ✓ Generate structured summaries of simulation results and explanatory plots
- ✓ Organize AssessmentsPlus feedback into report-ready outputs
- ✓ Access AI-assisted recommendations to support model refinement
- ✓ Interact with insights to further explore and implement guidance
