

KIWI™

Data Repository Module

The Data Repository module, part of the KIWI Platform, is a cloud application with a user interface which allows users to manage and browse files and associated pharmacometric metadata within a pre-defined directory structure stored in a version control system. The Data Repository has a hierarchical structure to control organizational, team, and user access to shared data files.

Workflow, Audit, and Tracking.

- Assign roles to allow various users to perform appropriate actions on relevant documents

Teams and Roles.

- Engage multi-organizational teams while controlling access on an as-needed basis
- Allow outside collaborators controlled access to data and deliverables

Team Management interface showing a list of teams and a detailed member list for a selected team.

Data Repository Module

A platform and methodology for uniting the process and deliverables created during the pharmaceutical research and development cycle

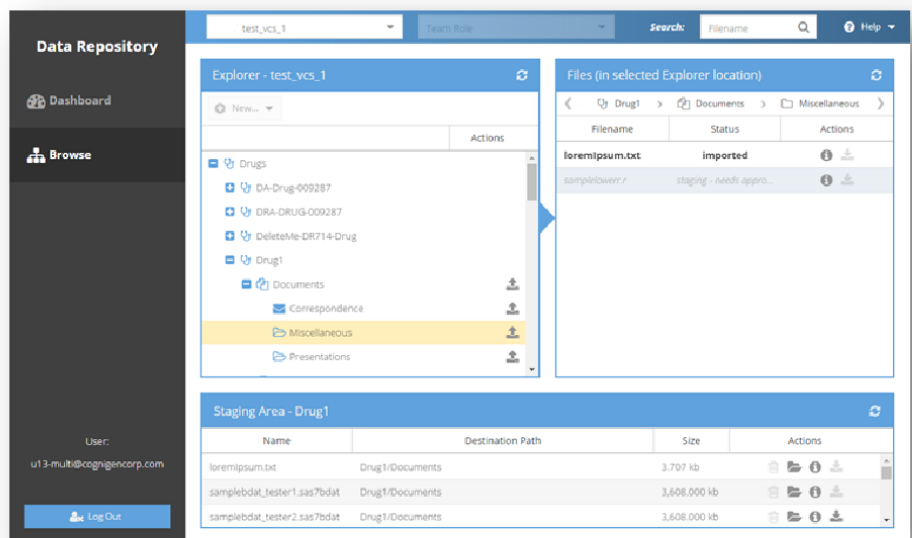

Organize and Manage.

- Keep track of relationships between studies and projects, house documents in a standardized structure
- Review, comment, and revise

Tool-Agnostic Collaboration.

- Store and share documents, files, data, and deliverables
- Prevent unauthorized viewing with granular permission controls
- Use your own familiar tool sets and programs
- Accommodate evolving project workflow and distributed teams with flexible structures
